## Rhinelander headphone amplifier

The brand new **Rhinelander** headphone amplifier is based on the legendary Black Cube Linear by **Lehmannaudio** which is used by well known professionals like A.J. van den Hul, Andreas Spreer (TACET) and Maarten de Boer (The Masters). Now you can experience a huge part of the Linear's transparency, tonal balance and micro-detail and at only a fraction of the cost.

The **Rhinelander** will find its place in the highly competitive group of ambitious budget conscious audiophile listeners. Available Now!

### *Some details:*

- Discrete Zero Global Feedback output stage with high quiescent current ready to drive most headphones or long cable runs
- Audiophile voltage amplifier stage
- Single source preamplifier reconfigurable to "headphone only" mode with two line source inputs by replacing just two jumpers
- Relays source selection / mute operation
- Only MKP caps in the signal path for perfect transient response and ambience reproduction
- Gain jumper selectable 6dB/20dB
- Hand selected potentiometer with very good channel tracking
- Double sided audio board
- External AC power supply
- Ultra fast rectifying diodes
- We only use low ESR electrolytic caps
- Low-noise, regulated power supply
- Gold plated RCA connectors
- Original Neutrik headphone jack with gold plated contacts
- Anodized aluminium faceplate and knob available in silver or black

Product introduction
